

Requirement Specification Document

Hostel Complaint Management System

Week 1 – Requirement Analysis and Complaint Database Module

1. Introduction

1.1 Purpose

The Hostel Complaint Management System is designed to replace the manual complaint process. It allows students to submit hostel-related complaints such as mess, room maintenance, electrical, plumbing, and cleanliness issues online. The system helps in faster complaint registration, tracking, and resolution.

1.2 Project Scope

The system reduces paperwork, improves communication, and ensures efficient complaint management. It supports complaint registration, tracking, and resolution for hostel students through a simple online interface.

1.3 Intended Users

Students – Submit complaints and track their status.

Warden/Admin – View, assign, and manage complaints.

Maintenance Staff – Resolve assigned complaints and update their status.

2. Business Requirements

2.1 Complaint Categories

Students can submit complaints under the following categories:

Electrical

Plumbing

Cleaning

Food / Mess

Furniture

Water Supply

Wi-Fi / Internet

Others

2.2 Complaint Status Types

Pending – Complaint submitted.

In Progress – Complaint is being resolved.

Resolved – Complaint has been completed.

Rejected – Invalid or duplicate complaint.

2.3 Reports

The system can generate:

Total Complaints

Pending Complaints

Resolved Complaints

Category-wise Reports

Monthly Complaint Reports

3. Functional Requirements

Functional requirements describe what the system must do.

4. Non-Functional Requirements

Performance – Fast complaint processing.

Security – Secure user login and data protection.

Reliability – System should work without errors.

Usability – Easy and user-friendly interface.

Scalability – Can support more users and complaints in the future.

5. Complaint Database Module – Data Requirements

Since this week's focus includes the Complaint Database Module, the following entities and attributes have been identified. The database used is MySQL.

5.1 Complaint Table

5.2 Student Table

6. Assumptions and Constraints

6.1 Assumptions

MySQL is used as the database.

Users have valid login credentials.

Internet connection is available.

6.2 Constraints

Only registered users can access the system.

Complaint status can be updated only by Admin/Warden.

7. Conclusion

This document captures the initial business and functional requirements for the Hostel Complaint Management System, with specific focus on the Complaint Database Module. It will serve as the foundation for designing the ER diagram, database schema, and subsequent implementation in the following weeks.
